

LSA-PLUS® Series 2

7.0

Overview

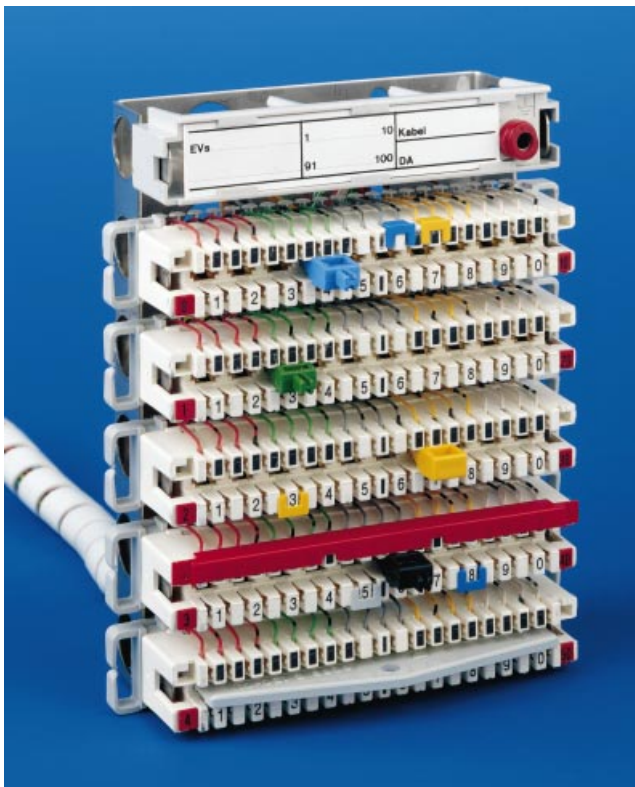

Overview

The KRONE LSA-PLUS connection system is used throughout the distribution level (local loop), in the main distribution frame (MDF), in the cross connection cabinet (CCC) and in the terminating distributor.

The LSA-PLUS Series 2 can be used throughout the telecommunications network. Originally developed for use under extreme climatic conditions in cross connection cabinets, its simple handling and high quality - resistant to even the most adverse climatic influences - have made this product range into what it is today: the LSA-PLUS connection system with the widest range of accessories. Today, LSA-PLUS Series 2 is the standard product for communication system engineers.

This chapter offers a comprehensive insight into the LSA-PLUS Series 2 and its accessories.
